Can cause hypocalcemia resulting in possibly fatal, delayed ventricular fibrillation. DO NOT MIX WITH AMMONIA, BLEACH OR OTHER CHLORINATED COMPOUNDS.

Eyes. Skin. Inhalation. Ingestion. Skin Absorption. Principle routes of exposure:

Skin contact: Corrosive. May cause permanent damage. Also very toxic in contact with skin. Eye contact: Corrosive. Causes permanent eye damage, including blindness.

4. FIRST AID MEASURES

Immediately flush eyes for 15 minutes with flowing water. Take the victim to a physician as soon as Eye contact:

possible. If possible, apply ice water compresses during transport.

Responders should put on appropriate personal protective equipment to protect themselves before Skin contact:

assisting victims. Immediately remove all contaminated clothing. Immediately flush the affected area for five minutes with large amounts of water. While the victim is being rinsed with water, have someone call to arrange medical treatment. If the exposure is to the eyes face, groin, or covers a large area, call 911. For smaller exposure, (i.e. A few drops on the skin), call a physician or poison control center. Immediately after flushing with water start massaging 2.5% calcium glucagon gel into the burn site. Responders must wear gloves when applying the gel to prevent secondary HF burns to their hands. Apply the gel every 15

minutes and massage until pain/redness ceases or professional medical care is available.

Inhalation: Immediately move the victim to fresh air. Call 911. Inhalation of HF fumes may cause swelling in the

respiratory tract up to 24 hours after exposure. Persons who have inhaled HF fumes may need

prophylactic oxygen treatment and should be seen by a physician as soon as possible.

DO NOT induce vomiting. If able to swallow, offer sips of water or milk. GET MEDICAL ATTENTION
